EXPERIENCE

Frontend Product Engineer · Nov 2021 – Present

The Motley Fool · Remote

- Led end-to-end development of a greenfield SaaS product as sole frontend engineer for its first year, making independent, creative technical architecture and UX decisions in an ambiguous, fast-moving environment. The product is now a core part of the business.
- Served as technical lead and product owner, authoring Jira epics, shaping roadmaps, and communicating technical trade-offs clearly to non-technical stakeholders to drive consensus and keep delivery moving.
- Developed multi-agent AI workflows using Claude Code to automate development tasks, designing prompts and chaining agents to accelerate delivery and reduce repetitive work.
- Built and grew an internal component library, establishing reusable, accessible UI patterns that accelerated delivery across multiple teams.
- Built scalable, performant user interfaces using TypeScript, React, and Next.js. Created custom UI components, data visualizations, complex workflows, and deep integrations with third-party backend services via GraphQL and RESTful APIs.

Software Engineer – Contract · Feb 2021 – Nov 2021

Nike · Portland, OR

- Rebuilt a globally-used internal tool using React, GraphQL, Node.js, PostgreSQL, and AWS, contributing across the full stack in a cross-functional product team.
- Independently designed and implemented a full-stack feature during the department's innovation sprint, owning the solution from concept through delivery without a dedicated designer.
- Collaborated closely with product and UX to improve workflows for an internationally distributed user base, driving design decisions in the absence of dedicated design resources.

Associate Software Engineer · Oct 2019 – Feb 2021

Zapproved · Portland, OR

- Contributed to a full-stack agile team building an analytical SaaS platform for enterprise legal teams, prioritizing security and compliance, and participating in every stage from planning and grooming through QA and deployment.
- Worked extensively with AWS infrastructure — ECS, Lambda, EC2, and SQS — to diagnose and resolve platform issues, building familiarity with distributed systems and cloud architecture from the inside out.

TECHNICAL SKILLS

Programming & Development: TypeScript, JavaScript, React, Vite, Redux, Next.js, Node.js, GraphQL, Recharts, git, npm, CLI, Jest, Material UI, CSS, Tailwind

APIs, Integrations & Data: RESTful APIs, GraphQL, third-party SDK integration, API design & consumption, Postman, AWS, security-conscious development

AI Assisted Development & Automation: LLM API integration, agentic workflows, task-specific agent design, Model Context Protocol (MCP), Claude Code, Cursor

Product, Solutions & Collaboration: Technical roadmapping, stakeholder collaboration, fast prototyping, user research & discovery, clear documentation, enterprise SaaS deployment, agile delivery (Jira)

EDUCATION & CERTIFICATIONS

Certified Scrum Product Owner (CSPO) · Scrum Alliance · 2025

Full Stack Web Development Program · Thinkful · Mar – Sep 2019

Bachelor of Arts, Psychology · University of California, Santa Cruz · 2010
